- Momentum-Driven
- Options Based
- Contra Based
- Intra-Day
- Tailor-made solutions

Our experience  
includes 15+ years  
of expertise in the  
financial markets.

# WE OFFER

## Pair Trading

Pair Trading is ideally a Market Neutral strategy which takes advantage of short lived discrepancy between the prices of two close substitutes. The strategy works well regardless of the market direction.

## Delta Neutral Strategy

Delta measures how much an option's price changes when the underlying security's price changes. The portfolio makes money when the Implied Volatility of the underlying asset declines.

## Mean Reversion

The general idea for this strategy is that the high and low prices of the stocks are temporary and the stock's prices in a long run tend to have an average price.
